CBD

Broad-Spectrum Hemp Extract

Available in 8mg • 16mg
Citrus-Mint & Unflavored

Gluten Free  Non GMO  Vegan  Made in USA
What is the Endo-Cannabinoid System?
The endocannabinoid system, or ECS, is one of the most important physiologic systems involved in establishing and maintaining your health. Endocannabinoids and their receptors are found throughout the body: in the brain, organs, connective tissues, glands, and immune cells and are involved in appetite, memory, movement, and pain.

How does CBD effect the ECS?
CBD (cannabidiol) is one of over 100 phytocannabinoids naturally found in the hemp plant. These compounds work to nourish and balance the ECS which in turn, helps balance many body systems. While research is on-going, this may explain why CBD seems to provide so many different health benefits.

Broad-Spectrum Extract from US Grown Hemp
Vital Choice CBD is made using a clean extraction process free from solvents and harsh chemicals.

Our CBD formulas are broad-spectrum, providing CBD in a base of other naturally occurring phytocannabinoids, as well as terpenes, and essential fatty acids, that work synergistically to maximize the therapeutic benefit by taking advantage of what is known as the ‘Entourage Effect.’

How much CBD should I take?
Current research suggests a “low and slow” approach is best. Because CBD works to balance your body’s ECS, starting with a low dose and increasing over time is the best way to find the right dose for you. Some evidence suggests taking a high dose may actually be less effective for some individuals.
